

Task	
	Create a checklist for testing the form for entering personalized payment card data

## Checklist

1. General:	
	Check for check marks for required fields
	Check for a message after submitting a form filled with valid data
	Check form behavior after submitting a form with empty fields
2. Check the field for entering a card:	
	Check the validation of the field with valid data
	Check the ability to enter different types of cards (Visa, Mastercard, etc.)
	Check the validation of the field with invalid data (more than 16 digits, letters, special characters, numbers separated by commas, space)
	Check the validation of an empty field
	Check the presence and informativeness of the error message after entering invalid data in the field
3. Check the field for entering the card expiration date:	
	Check the validation of the field with valid data
	Check the validation of the field with invalid data (non-existent date 15/36, date in the past, letters, comma separated data, space, special characters other than "/")
	Check the validation of an empty field
	Check the presence and informativeness of the error message after entering invalid data in the field
4. Check the field for entering the CVV code:	
	Check the validation of the field with valid data
	Check the validation of the field with invalid data (2 characters, 4 characters, letters, special characters, 4.25, -125)
	Check the presence and informativeness of the error message after entering invalid data in the field
5. Check the field for entering the cardholder's name:	
	Check the validity of the field with valid data (two words separated by a space)
	Check the validity of the field with invalid data (one word, numbers, special characters, large number of characters 200, two words separated by a comma)
